

Installation Instructions For GM Lower Control Arm Modification

- 1) Place lower mounting ring on control arm as shown in photo.
- 2) Scribe a line around the inside of the mount.
- 3) Remove material to within 1/32" of scribed line.
- 4) Weld ring to control arm with a minimum of (4) 1" long welds on either side of the mounting holes. Ring can be fully welded in if desired.

Caution: For coil over applications the plate must be backed up with an additional 5/16" nut on the bolts that hold in the shock (see diagram below).
